

## **Certified Information Privacy Technologist (CIPT)**

The CIPT is the first and only certification of its kind worldwide. It was launched by the IAPP in 2014 to meet the growing need that only tech pros can fill—securing data privacy at all stages of IT product and service lifecycles.

The CIPT credential shows you've got the knowledge to build your organisation's data protection structures from the ground up. With regulators worldwide calling for tech professionals to factor data protection into their products and services, the job market for privacy-trained IT pros has never been stronger.

Whether you work in the public or private sector, data privacy skills are quickly becoming a must-have—and that's a great opportunity for you.

The CIPT certification also holds accreditation under ISO 17024: 2012.

What will you learn?

- Critical data protection concepts and practices that impact IT
- Consumer data protection expectations and responsibility
- How to bake privacy into early stages of IT products and services for cost control, accuracy and speed-to-market
- How to establish data protection practices for data collection and transfer
- How to preempt data protection issues in the Internet of Things
- How to factor data protection into data classification and emerging tech such as cloud computing, facial recognition and surveillance
- How to communicate data protection issues with partners such as management, development, marketing and legal.

Who should attend?

Data Protection Officers

IT Managers and Administrators

Records Managers

System Developers

IT Security specialist

Anyone who builds and develops IT systems
